PROFESSIONAL SUMMARY

Forward-thinking Computer Science undergraduate with hands-on industry experience across full-stack web, mobile, and AI-driven systems. Adept at leveraging modern frameworks (React.js, React Native, Node.js, FastAPI) to build secure, production-grade applications. Demonstrated strong problem-solving skills — from resolving critical production defects to architecting multi-tenant systems from scratch — alongside cross-functional leadership in technical and community initiatives. Passionate about secure backend infrastructure (OAuth, JWT), CI/CD, and integrating Machine Learning pipelines (RAG) for data-driven solutions.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

09/2023 - Present

Madan Mohan Malaviya University of Technology, Gorakhpur | CGPA: 7.62

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, C++, HTML5/CSS3

Frameworks & Libraries: React.js, Next.js, React Native (Expo), Node.js, NestJS, FastAPI, Tailwind CSS, Pandas, PyPDF

Databases & Infrastructure: PostgreSQL, MongoDB, Redis, Firebase, Prisma ORM, BullMQ, CI/CD (GitHub Actions, Husky), Git/GitHub

AI, ML & Security: Hugging Face (BART, BERT), Retrieval-Augmented Generation (RAG), Secure Authentication (JWT, OAuth), Zero-Shot Classification

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | Groww You [\[Link\]](#)

06/2026 - 08/2026

- Architected a multi-tenant ERP platform from scratch — web dashboard plus a React Native/Expo mobile app — covering inventory, multi-branch, and ledger management with GST/E-Way billing and dual-format (A4/Thermal) invoicing.
- Fixed a critical offline-sync data-integrity bug with an OTA-safe pure-JS UUID generator and dual-trigger retry logic, and introduced the codebase's first CI/CD gates via Husky and GitHub Actions.
- Root-caused and fixed a critical repeated-logout bug in a live ride-hailing app (a token-refresh race condition), building a unified refresh engine with request locking and queued retries, then planned a staged, monitored rollout.
- Shipped a Broadcast & Notification Management System on the ride-hailing Admin Dashboard for real-time rider/driver communication.
- Built the end-to-end Instant & Appointment booking system for a home-services marketplace (client + partner apps), including Ratings & Reviews, FCM push notifications, and Wallet/Bank Account management.
- Maintained live production deployments across ride-hailing, home-services, and e-commerce apps — database migrations, backups, builds, and critical defect fixes.

LEADERSHIP & INVOLVEMENT

Secretary | National Service Scheme (NSS) Cell, MMMUT [\[Link\]](#)

07/2025 - Present

- Directed cross-functional teams executing large-scale university initiatives (PARARTH'26, GOONJ'26) and technical workshops that raised student digital proficiency.
- Spearheaded community outreach and structured educational programs, driving volunteer engagement and establishing secure, compliant documentation pipelines.
- Mentored incoming cohorts in technical problem-solving and professional domains, mitigating logistical bottlenecks to ensure robust event execution.

Technical Co-ordinator | IIMS-2025 MMMUT [\[Link\]](#)

01/2025 - 04/2025

- Architected and maintained the official international conference website, ensuring high availability and secure handling of global participant submissions.
- Engineered automated workflows for bulk communication and data management, streamlining event logistics and cross-departmental coordination.

KEY PROJECTS

SEO Health Scanner [\[Link\]](#)

August 2025

- Architected a full-stack SEO analyzer utilizing NestJS, Next.js, and Prisma ORM to evaluate web performance metrics securely via the Google Lighthouse API.
- Engineered an asynchronous task pipeline using BullMQ to reliably process resource-heavy API jobs and integrated Gemini AI models for automated, actionable reporting.
- Optimized system latency by implementing centralized Redis caching and nested database transactions.

AI-Powered Legal Risk Analyzer [\[Link\]](#)

November 2025

- Developed an AI document analyzer using Python and Hugging Face NLP pipelines for zero-shot risk classification and named entity recognition.
- Designed a custom text-chunking algorithm to successfully bypass NLP token limits, enabling seamless and secure parsing of complex multi-page contracts.

ACHIEVEMENTS

- Solve complex data structures and algorithmic challenges using advanced patterns in C++.
- Awarded Certificate of Appreciation for technical coordination of IIMS-2025 by MMMUT's Dept. of Civil Engineering (April 2025).
- Secured 3rd place in Flip Flop (Duo Coding Event) at ENNEXUS'24 (April 2024).
- Achieved All India Rank of 61,134 in Joint Entrance Examination (JEE) Mains (April 2023).
